What the numbers mean

BuddyScore (0–100)

A BuddyAds composite of mention rate, recommendation position, citations, and on-site AI-readiness. It is not an official ranking from OpenAI, Google, Anthropic, or any other provider.

LLMs checked

How many distinct AI assistants we actually queried in this run. This sample: ChatGPT, Gemini, Claude, Perplexity, Copilot, Grok.

Queries transacted

Buyer-style prompts sent to those LLMs (unique questions × platforms). This sample: 24 transactions, 22 successful answers.

Mention vs citation

Mention = the model named your brand. Citation = it linked to your website. This report separates “named but not linked” from “named and linked.”

Position

When several brands are listed, 1 = first recommended. Lower is better. N/A means the brand was not listed.

Best / worst LLM

Highest and lowest visibility among platforms with enough successful answers. Small gaps under 5 points are noise at Medium confidence.

Where Northline stands in AI answers

Northline is known inside ChatGPT and reasonably visible on Claude, but is not the default recommendation in this category. Across 22 successful answers, the brand was named in 41% of them and cited as a source in only 12%. HubSpot is mentioned more often and usually earlier.

The pattern is consistent: assistants describe Northline accurately when they know it (mid-market analytics for revenue teams), then lose the recommendation to larger vendors that own comparison pages, review sites, and citation-friendly documentation. Grok and Copilot barely surface the brand at all.

Priority is not “more content.” It is becoming easier to recommend: comparison proof, third-party citations, and entity clarity so weaker platforms can retrieve the same facts ChatGPT already uses.

Your brand falls in this category

KNOWN ALTERNATIVE

Northline is recognised in the category (mid-market revenue analytics) but is not the default recommendation. AI names you when prompted, rarely leads the shortlist, and almost never cites your site. One tier below category leaders like HubSpot.

Category leader Default pick in most answers	Known alternative You are here	Occasional mention Named in some queries only	Low visibility Rarely appears	Invisible Not found in answers
---	-----------------------------------	--	----------------------------------	-----------------------------------

What you are doing well, badly, and not at all

These three lists sit directly under the executive summary. Every item is tied to observed LLM answers or the crawled site — not generic SEO advice.

DOING WELL	DOING POORLY	NOT DOING
Category language is clear Entity match 82 When named, models describe Northline as “analytics for B2B revenue teams” — aligned with the homepage H1.	Rarely the first pick Avg position 2.7 Even on platforms that mention you, HubSpot or Salesforce is listed earlier in 14 of 22 answers.	No comparison pages 0 / vs pages Crawl found no Northline vs HubSpot (or similar). Models invent the comparison from competitor sites.
ChatGPT already recommends you 4/4 mentions On “best analytics for mid-market SaaS,” ChatGPT listed Northline first or second in every successful answer.	Almost never cited 12% citation rate Only 3 answers used northline.ai as a source. Perplexity cited G2 and HubSpot docs instead.	No FAQ / speakable Q&A FAQ schema: none Zero question headings on the homepage. Assistants have no extractable “who is this for?” block.
Product facts are crawlable Schema: Organization JSON-LD Organization + Product names are present. Claude reused those product names twice without inventing extras.	Uneven across assistants Vis. 86 vs 28 ChatGPT visibility 86; Copilot 33; Grok 28. Buyers using Microsoft or xAI will not find you.	No third-party proof cluster 0 review citations No G2, Gartner, or customer-story URLs in answers. Competitors supply the proof layer you do not.

Read this as a system, not three isolated lists

What you do well (clear category language) is why ChatGPT can recommend you. What you do poorly (late position, weak citations) is why you lose the shortlist. What you are not doing (comparisons, FAQ, third-party proof) is why Gemini, Copilot, and Grok have nothing reliable to retrieve. Fix the missing layer and the weak platforms have a chance to catch ChatGPT — not the other way around.

How each assistant treated the brand

6 LLMs checked. 24 queries transacted (4 buyer prompts × 6 platforms). 22 successful responses analyzed. Prompts covered: category recommendation, alternative-to-HubSpot, mid-market analytics, and “who should we shortlist.”

LLM	Queries	Mentions	Mention %	Avg pos.	Citations	Visibility
ChatGPT	4	4	100%	1.8	2	86
Claude	4	3	75%	2.3	1	71
Perplexity	4	2	50%	2.5	2	62
Gemini	4	2	50%	3.0	0	54
Copilot	4	1	25%	4.0	0	33
Grok	4	1	25%	N/A	0	28

Best — ChatGPT

Named Northline in every successful answer and placed it 1st or 2nd. Cited northline.ai twice. This is the only assistant that behaves like it has a stable entity for the brand.

Worst — Grok

One weak mention, no position, no citation. Answered the category with HubSpot, Tableau, and “enterprise BI tools.” Northline is not in its retrieval set for this query class.

Mention vs link — how AI talked about you

Brand mentioned, no link

7 answers

41% of mentions

Brand mentioned + your link

3 answers

14% of all answers

No brand mention

12 answers

55% of all answers

Most visibility is “name only.” ChatGPT and Claude mention Northline but often without linking northline.ai. Perplexity is the only platform that cited your domain twice. Mentions without links do not send traffic or reinforce authority.

Query outcomes that matter

WIN

“Best analytics platforms for mid-market SaaS”

ChatGPT #1 Northline, Claude #2. Only prompt where you lead the list.

WIN

“Tools like HubSpot but for revenue analytics”

Claude named Northline with a correct product description. Perplexity cited your pricing page.

LOSS

“Who should we shortlist for BI in 2026?”

Gemini and Copilot: Tableau, Power BI, Looker. Northline absent. Grok same list.

LOSS

“Northline vs HubSpot analytics”

No model had a dedicated comparison. Perplexity cited a HubSpot blog. You did not appear as a peer.

Who AI recommends instead of you

Share of voice is the share of brand mentions across all successful answers (your brand + observed competitors). HubSpot is the gravitational center of this category in LLM answers — not because of ads, but because models can retrieve comparison copy, docs, and reviews.

Share of voice in 22 answers

Brand	Mentions	Share	Bar
HubSpot	18	31%	
Northline Analytics (you)	16	28%	
Salesforce	13	22%	
Pipedrive	7	12%	
Zoho	4	7%	

Where they beat you

Default recommendation HubSpot named first in 11 answers

You are a peer on ChatGPT, an afterthought elsewhere.

Citation inventory G2, HubSpot Academy, Salesforce Help

Models quote competitor domains. Yours almost never.

Comparison ownership “HubSpot vs Salesforce” pages exist

No Northline vs anyone. Assistants cannot place you in a pairwise choice.

Co-occurrence Northline + HubSpot together 6×

When you appear, it is usually as an alternative — useful, but you are not the hub.

Competitive read

You are close on raw mention count (16 vs HubSpot’s 18) and far on influence. Mentions without first-position and without citations do not convert AI answers into pipeline. Closing the gap means giving models the same retrieveable proof HubSpot already has — not matching their ad spend.

Highest-leverage moves

Three priorities surfaced from this analysis. Full playbooks, timelines, and per-platform tactics are available on a strategy call — not in this report.

1 Publish comparison pages

Northline vs HubSpot and vs Salesforce — the missing retrieval target for shortlist and “vs” prompts.

2 Add extractable FAQ + schema

Eight buyer questions on-site so every LLM can quote the same facts ChatGPT already uses.

3 Build citable third-party proof

G2 profile, quantified customer stories, methodology page — what Perplexity cites for competitors.

Final takeaway

Northline is real to ChatGPT and almost invisible to Copilot and Grok. Fix retrieval — comparisons, FAQ, citable proof — then re-test. The next page has a one-line read per LLM; detailed strategy is on the call.

rohit@buddyads.agency

One read per assistant — full playbooks on a strategy call

Each LLM needs a different lever. This page is intentionally brief. Connect with us for a tailored strategy call to get the full roadmap per platform.

ChatGPT

Protect & extend

You already win here. Keep entity consistency and add citable proof so position #1 becomes default, not occasional.

Claude

Convert mentions to citations

Claude describes you well but rarely links. Add FAQ schema and a public methodology page it can quote.

Perplexity

Win the citation war

Perplexity cites competitors' G2 and docs. Match that proof layer or you stay mentioned without traffic.

Gemini

Enter the shortlist

Gemini defaults to Tableau/Power BI. Comparison pages and third-party reviews are the unlock.

Copilot

Basic retrieval fix

Copilot barely knows you exist. Repeat the same entity strings across title, H1, schema, and About.

Grok

Category insertion

Grok answers from enterprise BI lists. You need "mid-market alternative" content in places Grok indexes.

Want the full strategy?

This report shows where you stand. A strategy call covers the how: exact pages to ship, prompts to re-test, citation targets per LLM, and a 30/60/90-day plan built for your category.
